

Capstone Project Topic (Template)

1. Project Title

Tayaq.ai

2. Topic Area

Education AI

3. Problem Statement

Traditional English learning in Kazakhstan is stuck in the 'London is the capital of Great Britain' era - it is sterile, academic, and completely disconnected from the digital culture of Kazakh youth. Current apps are too polite; they don't provide the high-stakes accountability or the 'bold' humor that local learners actually find motivating. Because these platforms lack local flavor and 'Уяттай' energy, young Kazakhs lose interest within the first week, leading to a massive waste of time and a 'fluency plateau' where thousands want to learn but nobody stays consistent.

What gap exists?

Gen Z and Millennials in Kazakhstan who are tired of boring tutors and want to learn English to access global memes, jobs, and travel, but need a «push.»

Who is affected?

Primarily Gen Z learners who find current ed-tech “cringe” or boring, and adult learners who lack the discipline for self-study.

Why does this problem matter?

Because without English, the younger generation is locked out of the global economy. By making the AI «Ұрысып беру» (scolding) in a way that feels like a funny friend or a strict but “ha-ha” mentor, you solve the **consistency problem**.

(3-4 statements max).

4. Proposed Solution

Tayaq.ai is the first hyper-localized AI language coach designed specifically for the Kazakh youth market. Our approach moves away from “polite,” passive learning and introduces “**High-Accountability Edutainment.**” Instead of generic “Try again” messages, our AI uses a bold, charismatic, and humorous persona that “roasts” users for their mistakes using modern Kazakh memes, the “Уятай” subculture, and relatable «Шала Қазақ» humor.

5. Target Users

Who will use this system? (e.g., students, enterprises, small businesses, administrators, etc.)

The primary audience for **Tayaq.ai** consists of digital-native Kazakh speakers who are highly active on social media (TikTok, Instagram, Telegram) and are dissatisfied with traditional, slow-paced language learning

6. Technology Stack

Frontend: Vue.js, Nuxt, Next.js

Backend: Python (Django/FastApi)

Database: SQL, Firebase, Supabase

Cloud / Hosting: Vercel

APIs / Integrations:

Other Tools: NumPy, PyTorch, Matplotlib, Sklearn, Pandas and etc.

(Not all fields are mandatory, leave blank if not applicable).

7. Key Features

- Feature 1: Login / Registration
- Feature 2: Lesson
- Feature 3: Communication AI
- Feature 4: Leaderboards

8. Team Members (with Email IDs)

Zhumagali Aman (250103145@sdu.edu.kz)- Software Dev

Rustamov Shokhrukh (250103072@sdu.edu.kz)- Software Dev

Abyz Nuradil (230103188@sdu.edu.kz)- Software Dev

9. Expected Outcome

What will be delivered at the end of the capstone? (e.g., working prototype, dashboard, mobile app, etc.)

Website or Mobile App with AI assistant

10. Git Repo Link (GitHub/GitLab)
